A privacy impact assessment (PIA) is a tool for assessing the impacts on privacy of a project, technology, service or other initiative and, in consultation with stakeholders, for taking remedial actions as necessary in order to avoid or minimize negative impacts. A PIA is more than a tool: it is a process which should begin at the earliest possible stages, when there are still opportunities to influence the outcome of a project. It is a process that should continue until and even after the project has been deployed.

A PIA is to be conducted to ensure that the privacy implications of the processing of PII will be appropriately identified, assessed and resolved according to legal and regulatory requirements.

Etat = 5th WD

This International Standard establishes commonly accepted control objectives, controls and related guidelines for the treatment of risks that have been identified through a risk analysis process such as the one described in ISO/IEC 29134 - Privacy impact assessment: Methodology

In particular, this International Standard specifies guidelines as well as privacy controls based on ISO/IEC 27002 in accordance with the privacy principles in ISO/IEC 29100, taking into consideration the regulatory requirements for processing PII which may be applicable within the context of an organization's information security risk environment(s).

Etat = 4th WD

This International Standard establishes commonly accepted control objectives, controls and guidelines for implementing measures to protect Personally Identifiable Information (PII) in accordance with the privacy principles in ISO/IEC 29100 for the public cloud computing environment.

In particular, this International Standard specifies guidelines based on ISO/IEC 27002, taking into consideration the regulatory requirements for the protection of PII which may be applicable within the context of the information security risk environment(s) of a provider of public cloud services.

Etat = Publiée en 08/2014
